Comment by [rlethbri...@gmail.com](#), Sep 1, 2011

Thanks for this, these codes and the accompanying article about how to form the url, were very useful to me!

Comment by [kothais...@gmail.com](#), Dec 27, 2011

Hi, I am using the below URL to download the NSE - India stock feeds but its delayed by 15 mins even after signing into YAHOO. Why so ? Is there any other syntax that I need to use to get the real time feed. Pls help me.

<http://chartapi.finance.yahoo.com/instrument/1.0/^nsei/chartdata.type=quote.range=1d/csv/>

Comment by [jeff.poh...@gmail.com](#), Apr 11, 2012

I might be a little late to the party, but does anyone happen to know what the code for debt/equity ratio might be?

Comment by [Bullet1...@gmail.com](#), Apr 20, 2012

WOW!! what a description about properties. Just put a spacer between words in property names

Comment by project member [Maas...@gmail.com](#), Apr 20, 2012

Thanks!

This page was part of the documentation for the library. The online documentation was replaced by a file (Documentation.zip in Download section). Because the CSV Quotes article is referencing to this site, it still exists. The table was created automatically and if a member had no description the .ToString(?) method was used.

Comment by [SteveFSm...@gmail.com](#), May 8, 2012

does anyone know if there is a property for sector and industry? I'd like to have this information per stock.

This is great information - thanks!

Comment by [coolakas...@gmail.com](#), May 23, 2012

Thanks for this information :)

Comment by smithch...@gmail.com, Nov 23, 2012

Great article, thanks! BTW, does anyone know what is the tag for "Next Earnings Date"?

Comment by [thinksam...@gmail.com](#), Dec 7, 2012

I am wondering what is the difference between for example Ask and AskRealtime?. When I get both data they are always the same or am I missing something?

Comment by Shhutche...@gmail.com, Apr 17, 2014

sales growth?

Comment by [akashlah...@gmail.com](#), Apr 21, 2014

can i get data for bombay stock exchange using <http://finance.yahoo.com/d/quotes.csv?s>

Comment by jimfoulk...@comcast.net, May 16, 2014

What symbol can I use for the S&P500?

Comment by bitminer...@gmail.com, Aug 3, 2014

I am looking for sector and industry parameters...Anyone can help please?

Comment by bitminer...@gmail.com, Aug 15, 2014

and about the last one month, 3 months performances? If someone can help me...

Comment by [treval...@gmail.com](#), Aug 22, 2014

Did these values just change recently because all of a sudden my "yahoo_finance_tags" array no longer matches up to these values. Please advise. Thank you!

Comment by harshal....@gmail.com, Sep 1, 2014

I think they did change (not all but some of them); still trying to find the newest codes

Comment by wals...@gmail.com, Nov 4, 2014

anyone know how to get sector or industry parameters for a specific company?

Comment by Josep.Ag...@gmail.com, Nov 5, 2014

j2 seems to return 4 columns instead of shares outstanding. Did anything change? how do you guys find the tags (hope is not just by try/compare method :)).?

Comment by t...@dichoidi.com, Feb 10, 2015

j2 return a value with comma separate list, hence when open in excels it put into separate column, so is there a way to enclose the field into a double quote or something like that? Also is there a different format other then csv, like json etc.. i try the yql but it seem the finance table is no longer available.

Comment by t...@dichoidi.com, Feb 10, 2015

Ignore my last comment about finance table, i am an idiot, the finance table is in the community section, when that box is checked the tables show

up.

Comment by [graig.ze...@gmail.com](#), Mar 10, 2015

It seems like the bulk of the properties are no longer supported. I can only get the change, date, price, last trade time and a few other details. Is Yahoo! removing support for most features in the API?

Comment by michaelc...@gmail.com, Mar 12, 2015

In Australia, I also have this problem. How can we get an answer to this question???

Comment by michaelc...@gmail.com, Mar 12, 2015

Solved. (I had to eliminate the 0's in s0 and p0).

Comment by [sfch...@gmail.com](#), Mar 12, 2015

The real time price (k1) and change (k2) are not returning any data. Only l1 and p2 returns delayed data. I don't know how long the delay is. Probably 20 minutes?

Comment by rupukris...@gmail.com, Mar 16, 2015

irun the api but real time value is not coming

Comment by bitminer...@gmail.com, Mar 16, 2015

SO I have the same problem in France. I obtain any value for the company name, the dividend. WHAT'S GOING ON YAHOO?

Comment by bitminer...@gmail.com, Mar 16, 2015

Nice Work michaelC, I have also removed the 0 characters. Thanks' man

Comment by [pko...@gmail.com](#), Mar 25, 2015

Correct, multiple properties return N/A now, it started happening few weeks back. As michaelC suggested removing 0 from parameter name works in case it has 0 in the name. But what to do with others? For example, I need to get price change during the day (c6 ?) and it returns N/A now. I actually can calculate it from other values which are still working.

My concern is that the rest of properties will stop working soon, and I just implemented the app which uses this api :-)

Comment by [jnars...@telus.net](#), Mar 30, 2015

Have the same problem... for example the Dividend (symbol "d") and the Dividend Yield (symbol "y") now returns n/a instead of the real data that I use to get. What has changed? How can I get that information back?

Comment by bitminer...@gmail.com, Apr 13, 2015

Exactly the same trouble in France, the dividend returns N/A for the european companies but not for US companies. I can obtain the values for IBM or for SDRL for example. If someone can post a solution or an explanation, it will be very helpful. Thanks

Comment by bitminer...@gmail.com, May 24, 2015

Any news from yahoo?? Thanks for advance

Comment by RWScaavu...@gmail.com, Jun 21, 2015

does anyone know how to get a closing price of a stock option contract such as: DIS170120C00110000

It does not work like a normal stock ticker?

Comment by [CraigMil...@gmail.com](#), Jul 31, 2015

Hey, so this is weird. Some stocks are getting weird data.

Tesla won't give the company name. Apple gives the wrong year high/low. These are weird stock-specific glitches that don't seem to happen for any rhyme or reason. These issues only occur with the data for those specific stocks, the script I wrote to download the data pulls it accurately for all others.
